This is a quarterly publication of the Office of Thrift Supervision, Risk Management Division, Washington, D.C.

For future reference, the tables for the **quarter ending March 31, 1997** will be available for retrieval after **April 20, 1997**, by calling OTS Publifax, at (202) 906-5660, and requesting **document number 32810**. The tables are also available on the OTS Home page at <http://www.ots.gov/quarter.html>

Selected Asset and Liability Price Tables

Selected Asset and Liability Price Tables contain "price tables" listing the estimated economic values of selected assets, liabilities, and off-balance sheet instruments in various interest rate scenarios. The economic values are estimated by the OTS Net Portfolio Value Model.

In addition to the price tables, the publication includes the following data. See the *OTS Net Portfolio Value Model* manual for more information on how the data is used by the NPV Model.

The quarter-end Treasury zero-coupon curve used by the NPV Model to create discount factors for assets, and yield curves for interest rate swaps and wholesale CDs.

- Quarter-end interest rates that are used by the Model to calculate discount factors for a variety of assets.
- Four tables listing estimated prepayments for the following types of single-family mortgages: 30-Year conventional FRMs, 30-year FHA/VA FRMs, 15-year FRMs, and 7-year balloon mortgages.
- One-month implied forward rates for the following interest rate series: Treasury, LIBOR, secondary market CDs, and retail CD rates.
- Price indications for a set of benchmark fixed-rate and adjustable rate mortgage securities. The price indications are intended to represent reasonable approximations of the quarter-end market price of the securities.

Explanation of Tables Containing
Annual CPR Estimates for Fixed-Rate Mortgages

These tables list estimated prepayment rates for moderately seasoned mortgage loans. To use the tables for mortgage-backed securities, match in WAC of the underlying collateral with the coupon in the table, or if the WAC is unknown, add 50 basis points to the pass-through rate as an approximation.

These prepayment rate estimates were generated using the OTS NPV Model prepayment functions in a "static" analysis where interest rates, once shocked, are assumed to prevail throughout the remaining life of each mortgage. As such, the prepayment rates differ somewhat from the estimates used in the option-based mortgage pricing model that calculates the mortgage prices used in the NPV Model.

The OTS NPV Model prepayment functions are based on the long-term payment rate forecasts of a number of Wall Street firms. The prepayment functions are updated periodically as these firms revise their forecasts. These estimates should serve only as a general guideline to current prepayment rates. Institutions may use prepayment rates that are different from these in their TB 13 analyses, but their estimates should be reasonable and well documented.
